TITANTREASURE SCOPE CLARIFICATION

VIP Transfer Workflow Add-On

Founder-rate pricing forasemi-automatedVIPtransferworkflowthatreduces friction during the transfer-bonus test period.

Current friction

Right now the VIP transfer flow is highly manual: an affiliate signs someone up, asks for their Telegram handle, then the owners have to contact that player directly to discuss the transfer. That creates extra steps, slows down the handoff, and increases the chance that owners keep getting contacted personally for bonus follow-up afterward.

Proposed improvement

The cleanest next step is a **semi-automated VIP transfer workflow**. Instead of asking for a prospect's Telegram handle and pushing them into direct owner DMs, the bot can collect the transfer request in Discord, package the details cleanly, route it for owner review, and keep the process organized while the transfer-bonus test is running.

Why this matters now: This would remove friction for affiliates and prospects, keep the owners from having to expose personal contact details as often, and make it easier to manage the current test period before deciding whether deeper automation is worth it. Because both sides are early in the build, the pricing below is shown at a softer **founder rate**.

What the original scope covers

Included in the original setup

Bot hosting / deployment environment

Discord server provisioning and structure

Verification flow and role assignment

Base onboarding and launch infrastructure

Initial Discord automation and bot runtime setup

Not included in the original setup

Dedicated VIP transfer intake and approval workflow

Owner-facing approval routing for transfer requests

Privacy-first handling that avoids exposing personal contact details

Approval logging, retries, and workflow recovery

Future automation layers once the transfer-bonus test is validated

Current operating constraints

The transfer process is still being tested around the **upfront bonus amount**.

The owners want to reevaluate profitability after roughly **half a week to one week**.

The current working cap is approximately **up to 7 transfers per day** until they review performance.

Because of that, this should stay **semi-automated** for now rather than using a direct API-based transfer process.

Summary

The original **$150 upfront payment** covered **hosting/infrastructure and the initial Discord bot + server setup**. That original plan established the launch roadmap and core infrastructure. The pricing below is for expanding or personally managing that roadmap in a more hands-on way during live testing, especially around VIP transfer workflow refinement, stability, and active growth execution.

Recommended next step

Scope	Includes	Price
Current setup / hosting	Bot hosting, Discord setup, verification flow, and base automation already delivered.	**$150 paid**
Refined build + manual VIP workflow	Finish and refine the Discord server build, improve the VIP transfer workflow while keeping owner approval manual, polish onboarding, referral, cashback, missions, proof, support, and staff operations, and make the server presentation-ready for launch and walkthrough.	**$750 one-time**

Founder-rate note

This pricing is intentionally discounted so TitanTreasure can keep building without taking on an outsized cost jump too early. It reflects a collaborative early-stage rate, not the long-term price of deeper workflow development and active server operations.

Ongoing management

If you want me to actively help run the server after the refined build is finished, the ongoing layer below covers hands-on maintenance, community operations, retention support, and engagement execution.

Ongoing service	Includes	Price
Monthly management fee	Bot monitoring, small fixes, workflow adjustments, hosting support, community management, growth support, moderation presence, retention pushes, and engagement programming such as trivia nights, prize games, mini-events, activity prompts, and recap posts.	**$500/mo**
Monthly engagement prize budget	Separate community reward budget for trivia prizes, giveaway credits, mini-event rewards, and engagement incentives. This is a spend budget for the community, not part of the management fee.	**$200/mo**

Engagement event examples

- Trivia nights with prizes or credits
- Game-themed mini competitions and activity challenges
- Scheduled community events to increase chat activity and retention
- Recap posts and momentum pushes tied to launches, wins, and VIP activity

A practical recommendation is to wait until there is a solid base of active members before leaning heavily into prize-funded events, so the spend has a better chance of creating real momentum.

Why this next step is worth adding

- It adds a new VIP transfer layer on top of the original Discord setup.

- It reduces manual friction for affiliates, prospects, and owners.
- It helps avoid situations where players keep contacting owners directly for bonus follow-up.
- It requires case management, approval routing, logging, and maintenance beyond the original bot setup.

Suggested client-facing position

The $150 covered hosting and the initial Discord bot setup. This quote is not replacing that promise. It is for the next step: **$750 one-time** to refine the build and improve the manual VIP workflow, followed by **$500/month** if you want me to actively manage the server, plus a separate **$200/month** prize budget if engagement events are funded.

Prepared as a scope clarification and add-on pricing overview for TitanTreasure.
